## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Art Unit: 2629

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-20 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-23 of copending Application No. 11/063,682. Although the conflicting claims are not identical, they are not patentably distinct from each other because Claim 1 of the instant application and Claim 1 of U.S. Application 11/063,682 are very similar. Claim 1 of the instant application teaches a keyboard structured to be incorporated into an electronic device, the keyboard comprising: a printed circuit board having a plurality of electrical contacts; a primary conductor portion including a number of primary conductors, each one of the primary conductors being elastically deflectable between a relaxed position and a deflected position, each one of the primary conductors in the deflected position electrically connecting together a pair of the electrical contacts; a secondary conductor portion including a number of secondary conductors, each one of the secondary conductors being elastically deflectable between a relaxed position and a deflected position, each one of the secondary conductors in the deflected position electrically connecting together a pair of the electrical contacts; a number of keys, each one of the keys being cooperable with a corresponding one of the primary conductors and at least a first corresponding one of the secondary conductors; the primary conductors and the secondary conductors being disposed between the printed circuit

board and the keys; and the each one of the keys in the first terminal position deflecting the corresponding one of the primary conductors to its deflected position, the each one of the keys in the second terminal position deflecting the corresponding one of the primary conductors and the at least a first corresponding one of the secondary conductors to their deflected positions.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
